1 Overview

1.1 Introduction

Unity Trust Bank was launched on May 1, 1984. It was born out of a vision by trade unions to create a bank that would embrace the philosophy of serving the common good.

The purpose of the Company is:

- (a) To be the bank with a social conscience,
- (b) to provide banking services to viable organisations, sole traders or individuals that contribute community, economic, social or environmental benefit to society, including, but not limited to, Trade Unions, co-operatives, charitable and commercial enterprises; and
- (c) to achieve sustainable returns for itself and its members as well as a social benefit.

Through the consistent implementation of its relationship led, safe growth strategy, Unity is now a thriving UK commercial bank that continues to embody its founding principles. To provide prudent, profitable commercial lending in the UK and to support jobs, industries, and the British economy.

Our values ensure we act in a way that helps to create a better society. They enable us to be at our best for our customers, communities, society, and other stakeholders.

- Enabling
- Collaborative
- Inclusive
- Straightforward

1.2 **Purpose of Pillar 3 document**

This document provides the Pillar 3 disclosures required of Unity Trust Bank Plc (referred to in this document as 'Unity' or 'the Bank') as of 31 December 2022. The Bank is authorised by the Prudential Regulation Authority ('PRA') and regulated by the PRA and the Financial Conduct Authority ('FCA'). Pillar 3 disclosures provide information on the approach used by the Bank to manage risk and maintain its capital resources. It sets out the Bank's:

- Approach to risk management,
- Compliance with UK capital requirements regulations,
- Governance structure,
- Asset information and capital resources,

1.3 Background and regulatory guidance

The Basel III framework of the Basel Committee on Banking Supervision (BCBS) was developed to improve the banking sector's ability to absorb shocks arising from financial and/or economic stress. The framework is structured around three 'pillars'. These are known as Pillar 3 disclosures because they complement the minimum capital requirements in Pillar 1 and the supervisory review and evaluation process in Pillar 2. The Pillar 3 disclosures are aimed at promoting market discipline by enhancing the level of disclosure of risk exposures and the management of those risks.

The Basel III reforms brought in by EU regulations, namely the Capital Requirements Regulation (CRR) and the Capital Requirements Directive (CRD), were retained in UK law on departure from the EU. The Fifth Capital Requirements Directive (CRD V) and Second Capital Requirements Regulation (CRR II), as implemented via the PRA Rulebook, refine and continue to implement Basel III in the UK. The final rules for the UK implementation of Basel III, which sets out global standards for capital and liquidity adequacy, is set out in PRA Policy Statement PS22/21.

Changes effective from 1 January 2022 include revisions to definitions of the leverage ratio, the net stable funding ratio, counterparty credit risk, market risk, exposures to central counterparties, interest rate risk in the banking book, maximum distributable amounts and reporting and disclosure requirements. The PRA has elected to revoke the revised capital treatment of intangible software assets, implemented in the EU during 2020/21 as part of its 'CRR quick fix' package, meaning that all such assets must now be fully deducted from capital.

These Pillar 3 disclosures are prepared in accordance with the Disclosure (CRR) Part of the PRA Rulebook which, with effect from 1 January 2022, prescribes the format of disclosures via templates in order to promote transparency, consistency and comparability of information between firms. Comparative information is not provided for certain disclosures adopted for the first time in 2022.

The BCBS released 'Basel III: Finalising post-crisis reforms to the Basel III framework' in December 2017. Having been delayed in response to the pandemic, the reforms are now expected to take effect from 1 January 2025. As the reforms include significant revisions to the Standardised approaches for credit and operational risk, they are being closely monitored for internal planning purposes.

These disclosures are made in accordance with part Eight of the Capital Requirements Regulation and Directive, as implemented ('CRR II') and the PRA Rulebook, and use the PRA's disclosure templates and instructions which came into force on 1 January 2022. They are supplemented by specific additional requirements of the PRA and discretionary disclosures on our part.

The objective of CRD V is to improve the banking sector's ability to absorb shocks arising from financial and/or economic stress, thus reducing the risk of spill-over from the financial sector into the wider economy.

The Bank uses the *standardised* approach to calculating Pillar 1 capital requirements, using the capital risk weighting percentages set out under CRD V.

The information provided is in accordance with the rules laid out in Article 435 of the CRR.

Unity satisfies the criteria for being a 'small and non-complex' institution under Article 433b of the CRR as contained in the PRA Rulebook. As such, these disclosures comply with the requirements of the derogation for small and non-complex institutions as set out in Article 433b.

Row numbers in the standardised templates and tables within the document relate to PRA prescribed references. Where rows are not relevant to Unity, they have in some circumstances been excluded for the purposes of enhancing the readability and understandability of these disclosures in line with Article 432.

CRD V requires a concise risk statement approved by the Executive Committee describing the institution's overall risk profile associated with its business strategy. The Bank has a low-risk appetite, particularly toward credit risk. This is evidenced within the lending portfolio with a whole book average LTV of c45%, 96% of lending within risk grades 1-5 and very low levels of default.

Summary of Key Metrics

Available capital (£000s)	Dec-22	Dec-21
1 Common Equity Tier 1 (CET1) capital	122,931	104,260
1a Fully loaded ECL accounting model	120,696	103,398
2 Tier 1	122,931	104,260
2a Fully loaded ECL accounting model Tier 1	120,696	103,398
3 Total capital	122,931	104,260
3a Fully loaded ECL accounting model total capital	120,696	103,398
Risk-weighted assets (amounts)		
4 Total risk-weighted assets (RWA)	672,893	589,551
Risk-based capital ratios as a percentage of RWA		
5 CET1 ratio (%)	18.27%	17.69%
5a Fully loaded ECL accounting model CET1 (%)	17.94%	17.54%
6 Tier 1 ratio (%)	18.27%	17.69%
6a Fully loaded ECL accounting model Tier 1 ratio (%)	17.94%	17.54%
7 Total capital ratio (%)	18.27%	17.69%
7a Fully loaded ECL accounting model total capital ratio (%)	17.94%	17.54%
Additional CET1 buffer requirements as a percentage of RWA		
8 Capital conservation buffer requirement (2.5% from 2019) (%)	2.50%	2.50%
9 Countercyclical buffer requirement (%)	1%	0%
10 Bank G-SIB and/or D-SIB additional requirements (%)	0%	0%
11 Combined buffer requirement (%) (row 8 + row 9 + row 10)	3.50%	2.50%
12 CET1 available after meeting the total SREP own funds	12.59%	9.61%
requirements	12.5570	9.0170
Basel III leverage ratio		
13 Total Basel III leverage ratio exposure measure	1,710,211	1,673,611
14 Basel III leverage ratio (%) (including the impact of any		
applicable temporary exemption of central bank reserves)	7.19%	6.23%
14a Fully loaded ECL accounting model Basel III leverage ratio		
(including the impact of any applicable temporary exemption of		
central bank reserves) (%)	7.07%	6.11%
14b Basel III leverage ratio (%) (excluding the impact of any		
applicable temporary exemption of central bank reserves)	7.18%	6.22%
Liquidity Coverage Ratio (LCR)		
15 Total high-quality liquid assets (HQLA)	782,783	822,783
16 Total net cash outflow	355,595	303,007
17 LCR ratio (%)	220%	272%
Net Stable Funding Ratio (NSFR)		
18 Total available stable funding	1,144,865	1,077,138
19 Total required stable funding	741,481	628,367
20 NSFR ratio	154.4%	171.4%

¹ LCR balances included above are as of 31 December 2022 and do not agree to LCR balances disclosed in section 3.4 which reports average LCR balances.

Total Loss Absorbing Capital (TLAC) and Minimum Requirement for Eligible Liabilities (MREL) regulations became effective from 1 January 2019. The Bank is in the lowest resolution risk level category where MREL

requirements are set to equal the level of Pillar 1 and Pillar 2 requirements also known as the Total Capital Requirement (TCR). The Bank's TCR as of 31 December 2022 is 10.10% (2021: 10.14%).

Additional information on the Bank's management of risk and its risk profile is included in the remaining sections of this document, and the Annual Report & Accounts.

Regulatory developments

The Financial Policy Committee (FPC) is responsible for setting the UK countercyclical capital buffer which creates a cushion for banks to absorb potential losses in the event of a stress. Following the economic recovery after the COVID-19 pandemic, the FPC increased the UK countercyclical capital buffer from 0% to 1% to be effective from 13 December 2022. A subsequent increase to 2% has also been announced in July 2022, effective from 5 July 2023, in line with the usual 12-month implementation period. The effective rate of 1% is reflected in the summary of key metrics table above.

When the standard risk level was calibrated in December 2019, the PRA proposed a reduction to Pillar 2A to ensure that the overall loss-absorbing levels in the system remained unchanged. In March 2020, following the outbreak of the pandemic, the FPC cut the CCyB to 0%. At that time, the PRA announced a temporary increase to the PRA buffer for all firms that received a Pillar 2A reduction. In June, the PRA announced the removal of this increase, with effect from the end of December 2022.

The implementation date for those areas of CRR II which were not currently in force came into effect from 1 January 2022. The following aspects of CRR II are most relevant to Unity:

Area	Change	Impact on Unity
Leverage	This is now a binding regulation, rather than just a calculated ratio.	Unity remains consistently above the minimum 3.25% requirement.
Net Stable Funding Ratio	This is now a binding regulation, rather than just a calculated ratio.	Unity remains consistently above the minimum 100% requirement.
Large Exposure	The 25% exposure limit will be calculated on a narrower capital base, namely Tier 1 capital	The maximum size of loan Unity can complete will reduce, albeit internal risk appetites restrict this already.
Interest Rate Risk in the Banking Book	Unity is required to calculate the impact of six predefined shock scenarios on their own funds.	Unity monitors the impact on economic value and remains within the maximum tolerance of 15% of Tier 1 capital.

The PRA has released a consultation paper in relation to the Basel 3.1 implementation, with a proposed implementation date of 1 January 2025. Unity will continue to monitor developments and consider the implications for our reporting and disclosures.

1.4 Basis and frequency of disclosures

This document, setting out the Pillar 3 disclosures for the Bank, has been prepared to give relevant information to calculating Unity's Basel III requirements and to explain the management of risks faced by the Bank in accordance with the rules laid out in CRR II Part Eight. The basis of these disclosures may differ from similar information in the Annual Report & Accounts prepared in accordance with International Financial Reporting Standards (IFRS); therefore, the information in these disclosures may not be directly comparable.

Pillar 3 disclosures are published annually, and concurrently with the Annual Report & Accounts in accordance with regulatory guidelines. The Financial Conduct Authority (FCA) has issued guidelines on disclosure frequency and the Bank considers that, given its size and complexity, summary Pillar 3 disclosures do not need to be made more frequently than annually in the absence of a material change in circumstances.

Both the Pillar 3 document and Annual Report & Accounts are published on the Bank's website www.unity.co.uk.

1.5 Verification

These disclosures have been reviewed by the Executive Committee and by the Bank's Board Audit Committee (BAC) on behalf of the Board and provided to the Bank's auditors. These disclosures have not been, and are not required to be, subject to independent external audit, and do not constitute any part of the Bank's financial statements.

1.6 Remuneration and governance arrangements

In order to comply with the disclosure requirements of the CRR II Part Eight Article 450, the responsibilities, and decision-making processes for determining remuneration policy, the link between pay and performance and the design and structure of remuneration, including profit share pay plans, have been disclosed in Appendix 1.

1.7 Scope of disclosures

The Bank is regulated and authorised by the Prudential Regulation Authority (PRA) and Financial Conduct Authority (FCA). The Bank has no trading subsidiaries. The information disclosed therefore relates to Unity Trust Bank plc only. No Pillar 3 information has been omitted as either being proprietary or confidential.

2 Risk management framework, objectives, and policies

2.1 Overview

The Board is responsible for approving the Bank's strategy, its principal markets and the level of acceptable risks articulated through its Risk Appetite Statements. It is also responsible for overall corporate governance, which includes ensuring that there is an adequate system of risk management and that the level of capital held is consistent with the risk profile of the business.

Specific Board authority is delegated to Board Committees and the Chief Executive Officer who may, in turn, delegate elements of discretion to appropriate members of Executive and senior managers. In addition BRC have delegated a lending authority to credit underwriting, that is overseen by the CRO but executed by Head of CR and the team.

2.2 Committee structures

The **Board Risk Committee (BRC)** is a Board Committee. It supports the Board by monitoring the ongoing process of identification, evaluation, and management of all significant risks across the Bank and determining that all risks are being managed appropriately, in line with its Risk Appetite Statement, and that adequate capital and liquidity is maintained.

The **Board Audit Committee** is a Board Committee. It supports the Board in carrying out its responsibilities for internal control and risk assessment and receives reports from the Internal Audit function (outsourced). It monitors the integrity of the financial statements and the effectiveness of the external auditors.

The Remuneration Committee is a Board Committee. It determines remuneration and employment policy, approving appropriate incentive schemes and any payments made under such schemes.

The **Nomination Committee** is a Board Committee. It makes recommendations on the size, structure and membership of the Board and its committees and keeps under review the leadership needs of the Bank.

The Executive Committee is a management committee and oversees and monitors strategic performance and risks of the business in line with the Board's Risk Appetite Statement.

The Asset and Liability Committee (ALCo) is a management committee and is primarily responsible for managing the market, capital, and liquidity risks (and treasury aspects of credit) that affect the Bank. Specific focus includes the economic outlook, interest rate risk, liquidity and funding, capital risk and treasury credit risk. ALCo met bi-monthly in 2022 and is chaired by the Chief Financial Officer.

The Operational Risk Committee (ORC) is a management committee which is primarily responsible for managing all of the operational risks within Unity. ORC met bi-monthly in 2022 and is chaired by the Chief Operating Officer.

The Conduct Risk and Compliance Committee (CCC) is a management committee with responsibility for overseeing conduct, products, marketing, regulatory compliance, and financial crime risks at Unity. CCC met bi-monthly in 2022 and is chaired by the Chief Commercial Officer.

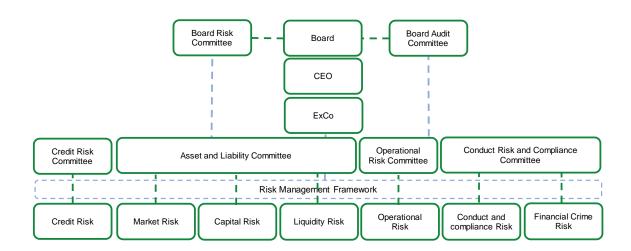

The Credit Risk Committee (CC) is a management committee with responsibility for overseeing all credit risks within Unity. CC met bi-monthly in 2022 and is chaired by the Head of Credit Underwriting.

2.3 Significant Risks

The Bank's significant risks arise in seven principal risk categories:

- Credit risk
- Market risk
- Capital risk
- Liquidity risk
- Operational risk
- Conduct and Compliance risk
- Financial Crime Risk.

Committee diagram showing responsibilities for risks

2.3.1. Credit Risk

Credit risk is an integral part of many of our business activities and is inherent in core banking products (overdrafts, loans, and cards, as well as commitments to lend) and other activities (for example, treasury transactions). Credit risk is the risk that a borrower or counterparty fails to meet their financial obligations in accordance with agreed terms.

All authority to take credit risk derives from the Board. The level of credit risk authority delegated depends on seniority and experience, varying according to the quality of the issuer or any associated security or collateral held.

The Bank's Credit Risk Policy is set within the Board approved risk appetite; the bank's credit performance is reported to each BRC and Board meeting by the CRO and determines the criteria for the approval of corporate exposures. It specifies credit management standards, including sector, credit rating and issuer limits, along with delegated authorities.

The Bank's policy is to maintain a broad sectoral spread of exposures within the Bank's areas of expertise. Credit exposures to customers are assessed individually and at least annually. The quality of the overall portfolio is monitored, using a credit scorecard system calibrated to anticipated probability of default and eventual loss. All aspects of credit management are controlled centrally. BRC receives regular reports on new facilities and changes in facilities, sector exposures, impairments and the realisation of problem and non-performing loans as covered in the monthly risk reporting pack.

The Bank's Treasury Credit Risk framework for wholesale market counterparties involves establishing limits for counterparties based on their credit rating. Due diligence on counterparties including a review of short-term credit ratings and Credit Default Swap pricing is also carried out, prior to transacting investments. Treasury investment information is reported monthly to ALCo.

Description of collateral

The Bank takes security (secondary sources of repayment) to mitigate credit risk. Loans and advances to customers are generally secured on residential or commercial property. Commercial property taken as security can involve ownership through investment vehicles or owner-occupied premises.

Where exposures are agreed on a secured basis, security is accepted:

- where the security is legally enforceable and is of a tangible nature and type;
- after a discount is applied to the valuation, depending on the type of security involved.

Debentures and personal guarantees may also be used as security.

Impaired Assets and Forbearance

The Bank uses an internal credit rating scorecard model to inform the decision-making process. The scorecard rating output and definitions are as follows:

Scorecard ratings 1 to 5 are considered 'performing' with sub-categories as follows:

- 1 Very strong credit risk
- 2 Strong credit risk
- 3 Good credit risk
- 4 Acceptable credit risk
- 5 Broadly acceptable credit risk but with some warning signs

'Problem debt' sub-categories are:

- 6 Customers on watchlist but still performing and expected to continue to operate
- 7 Substandard Risk of business failure although no loss anticipated to Unity
- 8 Default Risk of business failure and potential risk of loss to Unity
- 9 Default in realisation

Customers are placed into the watchlist or substandard category if they show signs of unsatisfactory performance and require close control but are still expected to continue servicing their indebtedness with Unity. These loans are still performing; events which may trigger watchlist status include:

- Deteriorating balance sheet;
- Deteriorating profitability and/or material losses;
- Creditor pressure and/or poor account conduct;
- Trading difficulties (e.g. loss of material contracts, suppliers, or personnel);
- Breach of covenants (typically debt service, rental income, or LTV);
- Loan repayment reversal;
- Loan repayments that are a minimum of 60 days past due;
- Material reduction in value of security; or
- Any other reason where the Bank considers that closer control is required.

In such circumstances, the Bank works with the customer to resolve business problems and agree a clear strategy, sometimes with the support of external, independent professional advisors.

If the Bank is convinced of the customer's ability and commitment to address its difficulties, it may agree to grant concessions to the original contractual terms.

Such concessions typically include:

- restructuring, waiving or reserving rights in the event of covenant breaches 22 cases;
- postponement of principal payments 3 cases;
- restructures of principal payments nil cases;
- extension of loan maturities nil cases;
- partial or full capitalisation of interest payments nil cases

For those customers that benefit from concessions, the Bank does not remove them from the problem debt portfolio until at least twelve months after the concession ends.

Other concessions the Bank may grant include:

- a partial write-off, followed by classification as default for at least twelve months; and
- a material postponement or forgiveness of interest or waiver and/or reduction of normal fees and charges.

Default status is for those accounts where the Basel III definition of default is met, i.e. the bank considers that the borrower is unlikely to repay its credit obligations without recourse by the bank to actions such as realising security and/or the borrower is past due more than 90 days on any material credit obligation.

An account is considered to be in default, even if the Bank expects to be fully repaid, where any one of the following applies:

- An instalment on a loan account is overdue for 90 days or more;
- An account has been in excess of its limit (or is overdrawn without an agreed limit) for 90 days or more;
- The Bank has applied forbearance;
- If as a result of lending being (either now or previously) at risk or in distress, the Bank has agreed to a material postponement or forgiveness of interest and/or "soft" rates or to a waiver and/or reduction of normal fees and charges;
- There has been a full or partial write-off of debt;
- The business has ceased trading and the customer is progressing with a voluntary realisation of assets; loan repayments have ceased, or interest only is being covered;
- There has been an event likely to result in insolvency which may involve bankruptcy, or the appointment of an administrative receiver, Liquidator or Administrator;
- If the Bank considers that at some point (normally taken as within the next 12 months) actions such as issue of Formal Demand will be required in order to achieve full repayment;
- Any other critical occurrence which indicates that the Bank may have to resort to security

A scorecard rating of 7 is allocated if an account is sufficiently secured to the extent that a loss is not anticipated but the loan performance does not meet the definition of default.

A scorecard rating of 8 is allocated if the account is in default. There may be a shortfall in security cover to the extent that a loss is anticipated. Interest on these accounts is charged and may be suspended.

A scorecard rating of 9 is allocated for any accounts which are subject to a formal realisation process.

The Bank applies IFRS 9 Financial Instruments which calculates a loan loss provision based on a forward-looking expected loss model. The Bank categorises loans into one of three stages depending on the scorecard rating system explained above. Assets that have not seen a Significant Increase in Credit Risk (SICR) since their initial recognition (origination or acquisition) and those which have low credit risk are shown in stage 1; assets that have experienced a SICR since initial recognition, but for which there is no objective evidence of a credit loss event are in stage 2 and assets for which there is objective evidence of a credit loss event such as significant deterioration in financial performance or formal insolvency process are in stage 3. A provision is calculated in accordance with the stage allocation. Notes 1, 11 and 26 to the Bank's Annual Report & Accounts gives further detail.

2.3.2. Market Risk

Market risk is the risk that changes in market rates or prices negatively impact our earnings or the market value of our assets and liabilities. The majority of the risk arises from changes in interest rates. The Bank does not have any foreign exchange exposure.

The Bank does not have a trading book; risks are limited to those intrinsic to the asset and liability products in the banking book. The interest rate risk appetite, approved as part of the Board risk appetite statement, together with the Treasury Policy, specifies the scope of the Bank's wholesale market activity, market risk limits and delegated authorities. Adherence to the Treasury policy is overseen by ALCo, which assesses the interest rate risk inherent in the maturity and re-pricing characteristics of the Bank's assets and liabilities. The principal analytical techniques involve assessing the impact of different interest rate scenarios over various time periods, focussing on fixed and floating rate assets and liabilities.

ALCo also monitors basis risk, reviewing the elements of floating rate assets and liabilities which are linked to different underlying reference rates as these may not always 'float' in the same way (for example Bank of England Base Rate and SONIA). The Bank has a policy with regards to the proportion of administered rate liabilities, such that it can control a significant proportion of its cost of funding and thereby manage its basis risk.

The NII sensitivities are indicative and based on scenarios and shocks prescribed in Rule 9.4A of the PRA Rulebook: CRR Firms: Interest Rate Risk Arising from Non Trading Activities Instrument 2020. They are also in accordance with Article 448(1) of the European Capital Requirements Regulation (CRR).

Calculations are done under the following scenarios:

- · Parallel up;
- · Parallel down;
- An immediate shock of +/-200 basis points ('bps') to the current market implied path of interest rates across over one year;

The EVE sensitivities are based on the six Basel Standard Outlier shocks:

Parallel up;Steepener;Short rates up; and

Parallel down;
 Flattener;
 Short rates down.

Non-maturing deposits ('NMD's) are deposits that have no contractual maturity or repricing dates, hence behaviouralisation assumptions are applied. The maturity profile for NMDs is substantially the same as the profile as at 31 of December 2021. The longest repricing maturity for NMDs for modelling purposes continues to be 36 months.

Unity also considers pension risk, the risk to the Bank's capital and company funds from the Bank's exposure to its defined benefit pension scheme and risks inherent in the valuation of scheme liabilities and assets.

2.3.3. Capital Risk

Capital risk is the risk that we do not meet minimum regulatory capital requirements under normal and stressed conditions. The Bank continuously monitors its capital levels through forecasting and stress/scenario modelling. Stress testing is performed quarterly and reported to ALCo.

Further capital risks arise from changes to the Bank's business model and long term goals, specifically the risks of not being able to carry out the Bank's business plan and desired strategy, including the ability to provide suitable products and services to customers. One example of strategic risk is the risk that the Bank suffers losses because income falls or is volatile relative to the fixed cost base.

In common with other financial institutions, Unity's financial performance continues to be impacted by the broader regulatory, economic and political environment; including the continued changes in Bank of England Bank rate, the cost of living crisis and the ongoing industrial action across multiple sectors. The economic environment in 2022 has been challenging but the Bank has demonstrated the strength of its financial resilience and the Board is confident that it can achieve its future growth plans.

2.3.4. Liquidity and Funding Risk

Liquidity risk is the risk that we will fail to meet our financial obligations as they fall due or can only do so at excessive cost. The Bank's liquidity management processes and limits are set out in the Treasury Policy which is reviewed and approved annually by BRC and Board. Liquidity forecasting is monitored daily by the Bank's Treasury function to ensure the level of High-Quality Liquid Assets continue to meet the guidelines set in the Individual Liquidity Adequacy Assessment Process (ILAAP). The Bank holds overnight funds in the Bank of England Reserve Account and invests in high quality debt issued by financial institutions: Covered Bonds, Medium Term Notes and Floating Rate Notes. Stress testing is reported quarterly in accordance with the framework set out in the ILAAP.

During the year, the Board approved the Bank's ILAAP. The Bank's Liquidity Coverage Ratio (LCR) is significantly higher than the 100% minimum. The Bank also reviews its compliance with the liquidity systems and controls requirements as detailed in the PRA Rulebook. In 2020 the Pillar 2 liquidity regime was embedded and has been fully incorporated into the ILAAP assessment.

The Bank is 100% customer funded and does not require inter-bank funding. The Bank's Risk Appetite Statement includes limits on the loan to deposit ratio and the liquid asset ratio. The Bank is a member of the Financial Services Compensation Scheme (FSCS) and adopts the prevailing compensation rules.

2.3.5. Operational Risk (including cyber and information security, people, legal, third party supplier, change and data quality).

Operational risk is the risk of loss arising from inadequate or failed internal processes or systems, human error, third party supplier failure, or external events. This includes fraud risk and the effectiveness of risk management techniques and controls to minimise operational losses.

The Board accepts that the Bank will incur operational losses as the Bank grows its business. The Bank's focus is to develop systems and controls that are robust, well-defined, and scalable, and to identify and respond to threats and emerging risks which could severely harm our customers or the viability of our business. Operational resilience continues to be an important area of focus for the Bank. In line with regulatory guidance, Unity has completed its initial self-assessment and will continue, over the transition period, to develop its resilience capability via ongoing enhancements.

Operational risks and corresponding actions are formally monitored and reviewed on a regular basis by ORC.

2.3.6. Conduct Risk and Compliance Risk (including Regulatory Risk)

Conduct risk is the risk that our behaviour, culture, or processes lead to customer detriment. Compliance risk is the risk of legal or regulatory sanctions, financial penalty, or reputational damage as a result of failure to comply with laws, regulations, or codes of practice. The Conduct Risk and Compliance Committee is a management committee and monitors trends in these areas. It meets a minimum if bi-monthly with matters escalated to sub-Board and Board committees as appropriate.

2.3.7. Financial Crime Risks

Financial crime risk is the risk that our product and services are used in connection with financial crime including fraud, money laundering, terrorist financing, bribery and corruption, and tax evasion. The Bank performs enhanced staff screening and due diligence checks during onboarding of employees and new customers. Second line risk and compliance reviews are conducted to test adherence to policies and procedures.

2.3.8. Emerging Risks Climate change

The Bank recognises that climate change is a significant risk and a major challenge for the global economy and society and local communities. Extreme weather events and the impacts of transitioning to a low-carbon economy have the potential to disrupt business activities, damage property, negatively affect people's livelihoods and otherwise affect the value of assets. There is potential to impact our suppliers' delivery and customers' ability to repay loans.

The Bank's approach to climate change has been informed by supervisory guidelines and our experience of delivering Social Purpose as a Bank. A plan is in place to continually develop the Bank's approach to climate change risk with Board oversight. The Bank has identified and quantified the physical risks (flood, subsidence, and coastal erosion) and transition risks in its customer loan portfolio. Stress testing has informed through the ICAAP that no capital requirement is recommended as a result of climate change risk and adaptation needs.

Economic Uncertainty

The pandemic has had a marked economic impact on all major economies. The uneven impact of Covid-19 restrictions and support mechanisms have led to different levels of financial pressure within industry segments and on our customers depending on their area of economic activity. Government support has been beneficial, enabling businesses to weather the impact of lockdowns. However, the ability of businesses to recover is unproven.

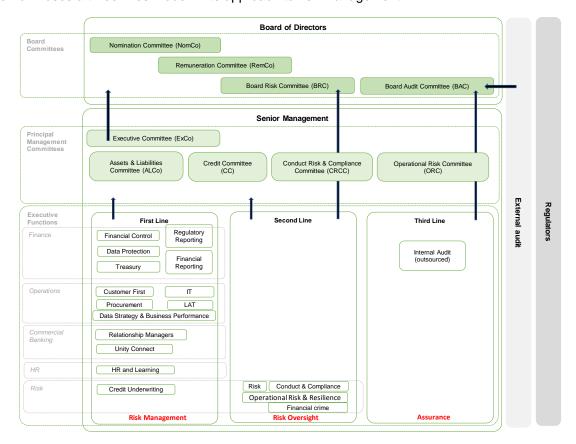

The economic outlook became more uncertain during 2022 and there are severe challenges for many people. High inflation and low growth present an environment not seen in a generation. The Bank of England through the Monetary Policy Committee have increased Bank Rate from 0.25% at the start of the year to 3.5% at the end of the year. Inflation has started to reduce in early 2023, however the speed and size of any decreases will dictate the need to continue changing Bank Rate.

UK growth for 2023 is forecast to be limited, with the potential for a technical recession still possible. The slow growth will result in increases in unemployment, which in turn could see an increase in credit provisions and defaults.

2.4 Risk management

The enterprise risk management framework sits above all of the processes and functions in the Bank and encompasses the requirements for identifying, assessing, managing, monitoring, and reporting on risk. The approaches used include risk and control self-assessment, measurement against key risk indicators, reporting of detailed risk management information, risk modelling, risk registers, risk event reporting, current and emerging risk reporting, and regular stress testing.

The Bank uses a three lines model in its approach to risk management.

First line activities

- Identify, assess, and manage risk
- Design, implement and operate controls to reduce or transfer risk
- Keep records of risks, controls, and control testing
- Run the business within Board-approved risk appetite
- Use key risk indicators to monitor risk exposures
- Report Risk Events and Near Misses
- Assess market conditions and external developments
- Produce management information and reports on risk

Second line activities

- Design, develop and maintain the ERMF
- Promote a consistent approach to risk measurement
- Advise, support and challenge risk management activities
- Monitor and report on risks and controls to risk committees
- Design and develop risk and compliance policies, set standards, and oversee implementation
- Oversee forward-looking risk at an aggregate level
- Act as secretariat to First Line Risk Committees

Third line activities

- Assess the effectiveness of internal control environment (including the operation of the ERMF)
- Liaise with senior management and the Board Audit Committee

The second line and third line review programmes are overseen by BAC and detailed findings are also reported into the appropriate management committee.

Stress testing is a key tool to understanding and managing risk. In support of this, the Bank has a framework that covers stress testing, reverse stress testing and scenario planning. As well as an understanding of the Bank's resilience to internal and external shocks, regular stress testing provides a key input to the Bank's capital and liquidity assessments and related tests of risk management and measurement assumptions.

ICAAP

The Internal Capital Adequacy Assessment Process (ICAAP) is the Bank's evaluation of its risks, the capital requirements of the business based on these risks, assessed under the CRD V framework, and the adequacy of the Bank's capital resources against these requirements. The ICAAP provides details of the approach to managing risk across the Bank and assesses capital requirements against the Bank's current position, the position against the Business Plan period and during severe but plausible stresses. The ICAAP is reviewed and updated annually and reviewed by BRC. Stress testing is undertaken quarterly and reviewed by ALCo.

ILAAP

The Internal Liquidity Adequacy Assessment Process (ILAAP) is the Bank's documentation of its evaluation of its liquidity risks, the current liquidity position and its requirements, assessed against regulatory requirements and risk tolerance. An integral component of the approach to liquidity risk management is stress testing, using the latest guidance issued within prudential regulations and the Delegated Act for the LCR. The ILAAP is reviewed and updated annually; regular stress testing is undertaken and reviewed by ALCo.

Reverse stress testing

Reverse stress testing informs, enhances, and integrates with the Bank's quarterly stress testing by considering extreme events that could cause the failure of the Bank. As such, it complements the ICAAP and ILAAP approaches, helping to frame the severe but plausible scenarios against complete failure scenarios.

The analysis is formally completed in conjunction with the reviews of the ILAAP and the ICAAP documents and reviewed and approved by ALCo, BRC and the Board.

Recovery Plan and Resolution Pack

The Recovery Plan represents a 'menu of options' for the Bank to deal with firm-specific or market-wide stress which can be rolled out quickly as part of a credible and executable plan. The Recovery Plan is enacted if certain key triggers are breached, or events happen in the market which are likely to affect the Bank detrimentally (e.g. failure of a counterparty or treasury issuer).

Orderly wind-up of the Bank is considered to be a viable recovery plan option for a small institution. The Resolution Pack provides the data required if it were necessary to wind up the Bank.

In preparing and planning for such extreme events, the Board ensures that it has taken these severe risks, however remote, into account in its planning and considered the mitigating actions available.

3 Capital resources and requirements

3.1 Overview

To protect customers and the wider financial markets from the risk of banking failure, regulators require that sufficient loss-absorbing capital is held to cover the risk exposures entered into by the business activities. Unity's CET1 ratio of 18.26% provides comfort that Unity is well capitalised to remain solvent with capital resource considerably above the minimum capital requirements.

Loss-absorbing capital resources are generally made up of a combination of equity and some debt holder funding plus any retained profits. Each firm calculates its specific capital requirements, resulting from exposures to specific banking assets and activities or required as buffers in case of future 'stress events' or other unforeseen losses.

The CRD V framework (the Capital Requirements Regulations (CRR II) and Directive) is supplemented by technical standards published by the European Banking Authority (EBA), together with local implementing rules and guidance from the PRA. The information below gives further details as to the Bank's capital resources, risk weighted assets and assessment for operational, concentration and market risks.

3.2 Total available capital resources

As of 31 December 2022 and throughout the financial year, the Bank complied with the capital requirements in force as set out by European and national legislation.

The capital resources of the Bank are as follows:

		2022	2021
		£'000	£'000
Share capital		24,730	24,678
Share premium		18,150	18,113
Reserves:	Capital redemption reserve	4,511	4,511
	Retained earnings	81,615	62.040
	Available for sale reserve	(5,131)	(342)
	ESOP reserve	(60)	(37)
Common Equity Tie	er 1 (CET1) capital before adjustments ¹	123,815	108,963
Adiustments to CET1	I		
Intangible assets		(22)	(60)

Tier 2 adjustments		-	-
Total Capital Resou	ırces	122,931	104,260

¹ CET1 capital before adjustment agrees to equity and reserves in the Annual Report & Accounts

3.3 Risk weighted exposure amounts and Pillar 1 capital requirements

Credit risk weightings for the Bank under Pillar 1 are determined under the *standardised* approach for credit risk and operational risk.

The following table discloses the exposure values for each asset class, the assigned risk weight and resulting capital requirement under Pillar 1. The average exposure value is calculated taking a simple average for the year.

31 December 2022

	Exposure value £'000s	Risk weight %	Risk weighted assets £'000	Pillar 1 capital requirement £'000	Average exposure value £'000
Loans and advances to zero risk weighted counterparties	775,727	0%	-	-	758,408

* Included a consider acceptable in deducted from violatic indicated acceptance and accordance and accordance

^{*} Includes pension asset which is deducted from risk weighted assets and regulatory capital

Credit risk mitigation techniques

Credit Risk Mitigation (CRM) refers to collateral agreements used to reduce risk arising from credit positions. This table shows the use of CRM techniques, broken down by loans and debt securities. This table includes both unsecured and secured exposures, and the value of exposures secured by collateral. The Bank does not utilise financial guarantees or credit derivatives, meaning collateral is the only technique used by Unity for CRM.

31 December 2022

Total exposures	881,106	779,808	1,660,914	779,808
Total investments	824,338	-	824,338	-

Total exposures	1,048,934	562,923	1,611,857	562,923

Investments Credit risk

Credit risk is controlled by setting limits that consider a variety of factors including the credit rating of the issuer. These ratings correspond to a credit quality step assessment which, in conjunction with the term of the investment, feeds a risk weighting under the Standardised Approach.

Treasury policy limits the maximum aggregated exposure to any single non-supranational issuer is £50m, (or £75m of total assets if the holdings are 100% regulated covered bonds). Supranationals and sovereigns are limited to £100m. Certain exposures, meeting the required credit quality can be up to ten years and this maximum tenor tapers to 12 months at the lower end of the acceptable ratings spectrum.

The table below shows the breakdown of the treasury investment exposures by credit quality, the risk weighting applied and corresponding Pillar 1 capital requirement.

Investment Credit Risk:

31 December 2022	Moody's rating	Risk weight %	Exposure value £'000	Capital requirement £'000

3.4 Analysis of the Bank's liquidity coverage ratio (LCR)

The liquidity coverage ratio is a measure which aims to ensure that the Bank maintains an adequate level of liquidity to meet its needs for a 30-day period under severe stress conditions.

The disclosure table sets out the abbreviated LCR disclosures in the format prescribed by the EBA. Disclosures are calculated based on a simple average for the reported year.

31 December 2022	Total unweighted value (average)	Total weighted value (average)
	£'000	£'000
High-quality liquid assets (HQLA)		804,299
Cash outflows		
Retail deposits and deposits from small business customers, of which:	526,695	49,776
Stable deposits	201,652	10,083
Less stable deposits	325,043	39,693
Unsecured wholesale funding, of which:	966,759	304,457
Operational deposits (all counterparties)	435,803	105,159
Non-operational deposits (all counterparties)	530,956	199,298
Credit and liquidity facilities	140,357	23,762

Total cash inflows	31,111	27,693

Liquidity Coverage Ratio (%)

278%

3.5 Concentration risk

The following is an analysis of the Bank's exposures by geographical area:

31 December 2022

of December 2022				
	UK	Other Europe	Other	Total
Loans and advances to customers	836,576	-	-	836,576
Cash and balances with central banks and governments	636,195	-	-	636,195
Investments	34,734	68,772	84,638	188,144
Fixed and other assets	8,264	-	-	8,264
Total	1,515,769	68,772	84,638	1,669,179

31 December 2021

	UK	Other Europe	Other	Total
Loans and advances to customers	723,523	-	-	723,523
Cash and balances with central banks and governments	680,111	-	-	680,112
Investments	68,872	20,019	119,271	208,162
Fixed and other assets	10,998	-	-	10,998
Total	1,483,504	20,019	119,271	1,622,795

The Bank's customer lending is entirely UK based and has a broad distribution of exposures throughout the UK. Geographical concentration is regularly monitored as part of the Bank's ongoing credit risk management, along with single name and sector concentrations. Risks in these areas are considered as part of the Bank's ICAAP and form part of the Pillar 2a capital assessment, with capital allocated based on the HHI methodology.

3.6 Operational risk

The Bank uses the Basic Indicator Approach to operational risk under a Pillar 1 capital requirement assessment. Under this approach, 15% of the Bank's average operating income for the previous three years is used as a proxy for operational losses. An operational RWA is then calculated such that 8% of that RWA gives the Pillar 1 capital requirement.

	Banking Activities		а	b	С	d	е
			Year-3 Year-2		Last Year	Own Funds	Risk weighted
			rear-3	rear-2	Last real	Requirement	exposure amount
	1	Banking activities subject to basic indicator approach (BIA)	21,948	25,137	47,183	4,713	58,918

3.7 Interest rate risk in the banking book (IRRBB)

The Bank is mainly exposed to interest rate risk where the Bank holds fixed rate assets and liabilities; when market rates change the value of these items is affected because their rate remains fixed. The Bank's appetite for IRRBB is calculated based on the standard PV200 calculation (described below).

A PV200 calculation assigns all balance sheet items to a "time bucket" based on the next interest re-pricing date (or maturity date if fixed) and discounts them back using a current market curve to assess its Present Value (PV_0). The discount factors can then be adjusted to simulate an immediate parallel 200bps increase and a 200bps decrease in rates. The difference between the PV_0 and the 2% shifts up and down indicate the Bank's sensitivity to interest rate movements from a value perspective.

The Bank's sensitivity to interest rate movements from an earnings perspective is disclosed in the Annual Report and Accounts note 26.

The Bank also assesses its IRRBB exposure using multiple shock scenarios to capture parallel as well as non-parallel gap risk measured in terms of EVE. Under this approach, capital requirements for IRRBB are measured by the scenario that results in the largest decline in EVE. The Bank has assessed each and does not meet the outlier test for a change in EVE greater than 15% of capital.

3.8 Leverage

The leverage calculation determines a ratio based on the relationship between Tier 1 capital and exposures to on and off-balance sheet items. The leverage ratio does not distinguish between high and low risk weighted lending nor recognise the value of loan collateral (low LTVs).

The Bank's ratio calculated in accordance with the FPC's leverage regime is 7.2% at 31 December 2022 (2021: 6.2%). The UK leverage ratio framework sets a minimum ratio of 3.25%. Although not subject to the framework, the Bank follows the requirement as best practice and maintains its leverage ratio in excess of this minimum requirement.

The risk of excessive leverage is managed through regular monitoring and reporting of the leverage ratio, which forms part of the risk appetite framework.

The following is a summary comparison of accounting assets versus leverage ratio exposure measure:

	2022	2021
	£'000	£'000
Total consolidated assets as per published financial statements	1,669,179	1,622,660
$\label{prop:conversion} Adjustment for off-balance sheet items (i.e.\ conversion\ to\ credit\ equivalent\ amounts\ of\ conversion\ amount\ amount$	35,594	51,418
Other adjustments	5,438	(467)
Leverage ratio exposure measure	1.710.211	1.673.611

Leverage ratio common disclosure template

	2022	2021
	£'000	£'000
On-balance sheet exposures		
On-balance sheet exposures (excluding derivatives and securities financing transactions (SFTs) but including collateral)	1,675,503	1,626,895
(Asset amounts deducted in determining Basel III Tier 1 capital)	(3,120)	(4,702)
Total on-balance sheet exposures (excluding derivatives and SFTs)	1,672,383	1,622,193
Other off-balance sheet exposures		
Off-balance sheet exposure at gross notional amount	78,269	109,356
(Adjustments for conversion to credit equivalent amounts)	(42,675)	(57,937)
Total off-balance sheet items	35,594	51,419
Capital and total exposures		
Tier 1 capital	122,931	104,260
Total exposures	1,710,211	1,673,611
Leverage ratio (Basel III)	7.19%	6.23%

Appendix 1 – Remuneration policy and practices

Unity Trust Bank plc follows the PRA Remuneration Code and SYSC section 19D. Part eight disclosure requirements include qualitative and quantitative remuneration items. This statement also sets out the disclosures required under the Code as they apply to Unity.

Unity's Remuneration Policy is set by the Board of Directors with support and guidance from the Remuneration Committee. Unity's Remuneration Policy complies with the Remuneration Code and other applicable legal and regulatory requirements; the Chair of the Remuneration Committee has specific responsibilities under the FCA Senior Persons Regime for the effective oversight of the Bank's remuneration policies. The Remuneration Committee annually reviews and recommends the Remuneration Policy to the Board, which must be aligned to the Bank's values, long term strategy and risk appetite. The Committee comprises Susan Sternglass Noble (Committee Chair), Alan Hughes, Allan Wylie (to 28 July 2022) and Alex Ryan (from 30 September 2022). The composition does not comply with Provision 32 of the UK Corporate Governance Code as a Shareholder Director serves on the Committee in addition to the Independent Non-Executive Director who chairs the Committee and the Chairman of the Board. The Committee feels that it is appropriate for a shareholder non-executive director to be on the Committee. The committee meets at least twice annually.

The Remuneration Committee determines the level of funds available for annual salary reviews for Bank employees, the remuneration for members of the Executive Committee (other than as noted below) and reviews and approves the annual Remuneration Policy Statement required by regulators. The Committee makes recommendations to the Board in relation to bank-wide remuneration policy, the Employee Profit Share Plan, employee share schemes, Executive and Non-Executive Director remuneration and significant changes to employee benefits.

The Bank's remuneration policy is:

- to align our people's interests with the Bank's purpose, its strategy, risk appetites and its values, and with the long-term interests of its shareholders, its customers and society as a whole;
- to enable Unity to attract and retain the best people for this purpose, who share its values, taking
 into account the competitor landscape;
- to enable sound risk management and control within our appetites and regulators' expectations;
- to comply with the Remuneration Code and other applicable legal and regulatory requirements;
- to make awards which seek to achieve an appropriate balance between short and long-term rewards, rewarding employees for the value they create as well as for their contribution; and
- to take into account the implications of awards on the long term financial position of the Bank.

The Bank recognises the need to recruit and retain motivated people to work for the Bank. How employees are engaged, appraised, trained and motivated plays a key part in the Bank's culture of fairness and consequently, the fair treatment of customers. To achieve this aim, the Bank provides a competitive remuneration package commensurate with businesses of a similar size and nature. In setting remuneration, the Bank consults with its recognised Trade Union representatives. The overall remuneration package consists of a number of elements which are set out below.

To ensure compliance with the Remuneration Code, the PRA's recommended RPS template has been adopted. Unity has one business area, Business Banking, which consisted of 140 (2021: 122) paid individuals (including Directors but excluding contractors) as at 31 December 2022.

The staff costs were as follows:

The clair cools were as renews.		
	2022	2021
	£'000	£'000
All Staff		
Total fixed staff employment costs	8,018	6, 364
Total variable staff costs	552	352
Total staff costs	8,570	6,716
Material Risk Takers*		
Material Risk Takers fixed employment costs	1,582	1,656
Material Risk Takers variable costs	61	55
Total Material Risk Takers costs	1, 643	1, 711

*Figures shown above are the staff costs relating to the 13 (2021: 12) members of staff identified during the year as Material Risk Takers ("MRT)", including any remuneration in the year received before or after they ceased to be MRT and any received prior to approval by the PRA, and including starters and leavers.

The Code requires that banks identify and designate as "Material Risk Takers" those members of senior management, risk takers, staff engaged in control functions and any employee receiving total remuneration that takes them into the same remuneration bracket as senior management and risk takers, whose professional activities have a material impact on the firm's risk profile.

In total 13 Material Risk Takers have been identified during the year (12 at year end) and a list is maintained by Human Resources. Additional restrictions apply to the remuneration of Material Risk Takers. All Board Directors (Executive and Non-Executive) are included as Material Risk Takers.

Unity remains committed to maintaining a diverse and inclusive workplace. The Board's diversity policy is available on the Bank's website. This also provides an indication of the Board's approach to diversity in executive and senior management positions for the purpose of succession planning. Unity is an accredited Disability Confident employer and has made a commitment to both the Women in Finance Charter and Race at Work Charter.

Unity's gender pay gap for 2022 was 8% (2021: 25%). This measure shows the difference in average earnings between women and men. Due to Unity's small workforce, normal levels of attrition can result in significant fluctuations year on year. The Bank's employee policies are designed to promote gender equality. Unity has committed to support the progression of women into senior roles by targeting to have at least 40% female directors by 2025.

Diversity and Inclusion remain core values of Unity.

Fixed remuneration

Basic salary – The Bank seeks to pay basic salaries which attract and retain talent. Paid to all employees including Executive Directors, reviewed on a semi-annual basis.

Benefits - Benefits include life assurance and health plans. Paid to all employees including Executive Directors.

Pension - Contribution to a defined contribution scheme. Paid to all employees including Executive Directors. The defined benefit pension scheme is now closed.

Variable remuneration

The Bank does not pay individual cash bonuses.

Profit share – Subject to the Bank's overall performance and review by Board Risk Committee, an annual profit share award may be paid to eligible employees at the discretion of the Remuneration Committee and the Board. The profit share is set as a percentage of basic salary, with the same percentage applied to all employees including Executive Directors. The profit share for 2022 was 9% (2021: 7%).

Share based remuneration – The Bank operates three share based schemes, the Share Incentive Plan (SIP), the Company Share Option Plan (CSOP) and the Key Person Share Option Plan (KSOP), details of each are provided below.

Share based schemes operated by Unity (audited)

The Bank has established several share based schemes designed to encourage employee ownership and increase retention whilst also aligning employee interests with those of shareholders, customers and stakeholders. Shares and Share Options may be awarded at the sole discretion of the Board, as recommended by the Remuneration Committee. Key highlights of the schemes are set out below with further detail provided in Note 27 of the Annual Report and Accounts.

The key points in the life of share based schemes are as follows:

- Grant The initial award. The Grant date is when holders start to earn the rights to the award;
- Vesting This is when the holders have earned the rights to their award, however for option schemes such as the CSOP and KSOP, holders may not access the benefits until the exercise date;
- Exercise This is when, for option schemes, holders are able to access the benefits of the award.

Share Incentive Plan

All employees who meet the service requirements (including Executive Directors) are eligible to participate in the SIP. The SIP is a tax advantaged equity-settled plan under which employees are entitled to Free shares, subject to £3,600 per annum cap. Employees can also purchase partnership shares, up to the value of £1,800 per annum cap and these may be matched by the Bank up to a maximum ratio of 2:1. The Free and Matching shares vest over a 3 year period contingent on continuing employment with the Bank.

Company Share Option Plan

The CSOP is intended for selected employees (including Executive Directors) across the Bank. Options are awarded, entitling the option holder the right to acquire shares at a pre-determined exercise price after the end of the vesting period. Subject to the option holder remaining in employment with the Bank, the shares vest over 5 years, with one third vesting in year 3, one third vesting in year 4 and the residual portion vesting in year 5. As a tax-advantaged scheme, employees are not individually allowed to hold shares with a market value exceeding £30,000 in the scheme at any time (increasing to £60,000 in April 2023).

Key Person Share Option Plan

The KSOP is intended for selected employees (including Executive Directors) across the Bank, with inclusion based on an annual assessment and recommendation from Remuneration Committee for Board approval. The KSOP was approved by the shareholders at the 2021 AGM. Fair and proportionate pay to all staff is an essential principal for Unity and the KSOP scheme is designed to strike a balance between being appropriate to motivate and retain essential skills within the Bank, whilst not distorting the pay ratio of the highest earner and others in the organisation. Options are awarded, entitling the option holder the right to acquire shares at their nominal value after the end of the vesting period. Vesting is subject to the option holder remaining in employment with the Bank and the performance conditions summarised below.

The shares vest over three years and are exercisable after a further two years, subject to board discretion and the clawback provisions set out below. Option holders earn rights to the benefits of the KSOP (vesting) by meeting defined, graduated targets (performance conditions). The graduated targets, which are aligned to the delivery of the Bank's strategic ambition are as follows:

- Financial Performance Return on Equity and Earnings per Share (basic)
- Non-Financial Performance Customer satisfaction, Employee engagement and Social & environmental goals.
- Individual Performance Based on Unity's standard performance gradings.
- Risk Overlays Credit losses compared to risk appetite, the nature and number of risk events and management of regulatory capital.

To ensure that the scheme remains proportionate and fair, a cap on the values of grant, vesting and annual exercise, at 75% of the gross annual basic salary of each participant applies.

The Board retain an overriding discretion over the final level of vesting and can scale back if the value has been unduly influenced by external circumstances, or determine that a claw-back shall apply within two years of the date the Option is exercisable.

Deferred Remuneration

The below table provides a breakdown of the deferred remuneration available to the senior management and MRT (subject to vesting periods) and the subset of remuneration dependant on the Bank achieving set targets approved by RemCo. The disclosure supplements information provided in Note 27 of the Annual Report and Accounts.

Deferred and retained remuneration	Total amount of outstanding deferred remuneration	Of which: total amount of outstanding deferred and retained remuneration exposed to ex post explicit and/or implicit adjustment	Total amount of deferred remuneration paid out in the financial year
Senior management	282	242	-
Shares	282	242	-
Other material risk-takers	30	-	-
Shares	30	-	-

Special payments

During the year Unity made inducements to no new joiners (2021: zero) and agreed to make severance payments to six employees (2021: six).

The total severance charge included in expenses in the year is £173k (2021: £65k) of which £114k (2021: £nil) related to Material Risk Takers. The highest amount relating to one single person for the year was £114k (2021: £15k).

Staff members in control functions are remunerated independently of the businesses they oversee. Total staff employment costs (including variable remuneration) in 2022 were £8.7m of which the employment costs of Material Risk Takers were £1.6m.
